## DESCRIPTION

Very exclusive digital-electrical cinch cable with a constant impedance of 75 ohm. The inner conductor's revolutionary design ensures previously unheard of low intrinsic resistances with extremely high levels of purity. Even the monocrystalline transitions in the cast HPOCC are filled with pure silver during the "Silver Gap HPOCC" production process. This produces an almost seamless structure in the conductor and creates the ideal electrical conditions for the transmission of signals. Full-metal silicone-pin screw plugs plated with 24-carat gold connect this valuable inner conductor practically resistance-free to any type of audio component in home hi-fi or home-cinema systems. The high technical requirements are also satisfied by the cable's exterior: The plugs' exteriors have been fitted with genuine leather and are really pleasant to handle.
