Width	90mm
Height	70mm

Speaker Wire

Speaker wire is a type of audio cable that carries the audio signal from the amplifier to the speaker. It is made of two conductors, one for the positive and one for the negative signal. The conductors are usually made of copper or silver, and are insulated with a plastic or rubber coating. The length of the wire is important, as longer wires have more resistance and can cause a loss of signal. Speaker wire is available in a variety of gauges, with 16-gauge being the most common for home use. It is also available in different colors, including white, black, and red. Speaker wire is sold by the meter, so you can buy exactly what you need for your system.
